

## File Extension Program

```
import java.util.Scanner;
import java.util.StringTokenizer;
public class UserMainCode {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String str1 = sc.nextLine();
        System.out.println(extensionString(str1));
    }
    public static String extensionString(String str1) {
        StringTokenizer t = new StringTokenizer(str1, ".");
        t.nextToken(); String str2 = t.nextToken();
        return str2;
    }
}
```
